Personal finance goals look a little different when you're in your 20s and 30s. While your parents are focused on managing retirement, you might be navigating the challenges of paying off student-loan debt, establishing yourself in a new career, buying a home, and having a family.

You may think that you have all the time in the world to set up a financial strategy, but time goes by more quickly than you expect. Working with a financial professional may help get you out of debt faster, save for important goals, and give you a head start on retirement.

So where do you begin? Here are six moves to consider to jump-start your financial future.

TAKE CONTROL OF YOUR HEALTH

Wait, what? It may seem counterintuitive, but your health plays a huge part in your financial well-being. If you are not currently covered by health insurance, you should consider making it a financial priority. Even if you are generally healthy, a car accident or unexpected illness can set you back financially.¹

Studies show that young Americans (age 18–34) are the age group most likely to go without health insurance. According to the Centers for Disease Control and the U.S. Census Bureau, 14.3 percent of 19-to-25-year-olds and 13.9 percent of 26-to-34-year-olds have no health insurance.^{2,3}

If you are under the age of 26, you may be able to get coverage through a parent or a guardian. If you are not eligible for an employer-sponsored health insurance plan or your parents' insurance, you can shop for health insurance plans on the Affordable Care Act (ACA) federal or state insurance exchanges. Visit www.healthcare.gov to get started.

NEGOTIATE YOUR SALARY

One of the savviest financial plays you can make early in your career is to learn how to negotiate a salary. Since your employers will base subsequent raises and job offers on your previous salary, you can improve your lifetime wealth dramatically by negotiating for a higher salary early on.

Here are some negotiating tips for boosting your salary:

- Do not be afraid to ask for a raise or salary bump.
- Demonstrate why you are worth more money.
- Do your homework so you understand the market for your skills.
- Ask for written goals, and set a future date for a review if your request is initially declined.
- Consider salary alternatives, such as performance bonuses and noncash perks, that can improve your lifestyle.

FIGURE OUT YOUR FINANCIAL GOALS

Do you dream of owning a home? Do you want to travel every year? Do you want your children to go to college? Whatever your personal goals are, you'll need to prepare for them.

Your goals might include the following:

Additional education: College, graduate school, and advanced certificate programs can open doors and boost your career prospects. However, tuition and fees for public, four-year colleges have been increasing by an average of 8% each year. Living expenses and little or no income (depending on your employment status as a student) will also raise the cost of education. Preparing now can help ensure a strategy to balance your college savings and loan needs.⁴

A house: Owning a house is still the dream for many young Americans. For most people, a house will be the largest purchase they ever make. Now is the time to prepare by thinking about a down payment, learning about your credit score (and fixing it if necessary), and studying market trends in your area.⁵

A business: If you aspire to be an entrepreneur, preparing financially may help you get ahead. Create the vision for the company you want to build, and identify the overhead you need to get started. From there, you can develop ongoing financial strategies that will help you launch a business with a sound financial standing.⁹

6 IMPORTANT FINANCIAL STRATEGIES FOR YOUR 20S & 30S

PAY DOWN & ELIMINATE DEBT

When they think about saving and investing, most people's minds immediately turn to retirement. While retirement is an important goal, many other intermediate life objectives also require you to develop financial strategies.

The amount of debt that individuals from 21 to 34 years old hold is staggering: 31% of U.S. consumer debt is in the hands of this demographic. For example, the average student loan is \$30,000.

School loans are not the only debt items holding younger Americans back. People born in the 1980s and 1990s hold an average credit card debt of \$3,542—and they use roughly 36% of their available credit. This credit comes at a high cost. A report from the Federal Reserve revealed that the average Annual Percentage Rate (APR) for variable-rate credit cards is 14%.^{6,7}

If you are living with significant debt, paying it off is one of the smartest financial moves you can make. You might be paying more interest than you are likely to earn by investing.

PROTECT YOUR CREDIT

For better or worse, your credit score is one of the most important indicators of your financial health. A variety of people and institutions can use your credit to make decisions about you, such as lenders, employers, and landlords. Among other debt characteristics, your credit score can reveal whether you pay bills on time or have ever defaulted on a loan. Damaged credit can be very costly over time.

Unfortunately, no secret formulas or easy fixes exist for bad credit. Rehabilitation takes time and discipline, but improving your credit is entirely possible.

Here are some simple steps that you can take now to improve and protect your credit:

- Check your credit report every year for free, and dispute any errors.
- Pay all bills on time by setting up payment reminders or enrolling in autopay when possible.
- Avoid late charges (all collections report to the credit bureaus).
- Pay down any balances on cards (high balances relative to your total available credit may impact your credit score).
- Pay off your credit cards in full each month.

INVEST FOR THE FUTURE

Automate your savings: The simplest way to save is to automatically direct a portion of each paycheck into your investment accounts. You will quickly become used to your adjusted budget.

Focus on saving a percentage of your income: Saving even 5% of your income is a great first step.

Build a budget: If you include a monthly goal in your budget, you are more likely to stick to your strategy than if you save whatever money you have left at the end of the month.

Consider Investing: Investing is one of the best ways to help grow and protect your hard-earned wealth over the long term.

Investing involves risk, and the return and principal value of investments will fluctuate as market conditions change. Your investment strategy should take into consideration your goals, time horizon, and risk tolerance. When sold, investments may be worth more or less than their original cost. Past performance does not guarantee future results.

Putting your money to work through investing gives you a greater potential for return than saving alone. It is important to know that all investments involve some degree of risk. Understanding and managing risk is one of the most essential pieces of a long-term financial strategy.

As a long-term investor, it is important to develop a clear understanding of your goals, risk tolerance, and timeline. A financial professional can help you identify your risk tolerance and work with you to create an investment strategy that helps you manage risk while pursuing your long-term financial goals.

Take Your Investing to the Next Level: New investors often start out investing on their own and then turn to a financial professional when they want access to sophisticated tools, experienced recommendations, and help developing targeted financial goals.
